ALOHA BANGLADESH

JULY 2020

*Symbol of excellence in brain development
for younger children*

ALOHA Journey in Bangladesh

In 2006 ALOHA started its journey in Bangladesh. Through relentless hardworking and dedication, ALOHA courses gain confidence, satisfaction, and popularity among the parents, guardians, students, and teachers. ALOHA means a symbol of the total development of the brain for younger children. For the last fourteen years, more than 70,000 students enrolled in ALOHA Mental Arithmetic courses in Bangladesh. ALOHA Bangladesh graduate students are doing the best in their respective professions.

Although ALOHA is not a regular school, it prepares children for their future learning pathways. Traditional learning systems still followed by most of the institutions in developing and third-world countries. Memorizing and understanding is still the primary goal of education. But it can't help our children in this high-speed and rapidly changing dynamic world.

We depend more and more on technology, which gradually seizing our inborn natural talent and capabilities. Our learning aim should be to manage and control technology for our behalf and betterment, but technology increasingly gaining control over us day by day.

We should teach our children how to achieve the skills to solve any critical problem in any changing environment. We should teach them meta-cognitive skills, analytical skills, and reasoning skills to validate the necessary information they required within the millions of data on the same topics they can find on the Internet.

Necessity of Arithmetic

Arithmetic skill is the necessary foundation of learning. Irrespective of any profession or age, we need arithmetic to calculate any situation, probability, planning, and almost all stage in our thinking.

Mental Arithmetic helps every human being to make any calculations mentally without any distractions and interruptions.

Creativity never comes from memorizing and understanding; instead, a creative brain builds on continuous questioning, finding, and solving all possible scenarios in a particular fact, subject, or problem.

So, we should focus on creative skills, meta-cognitive skills, analytical skills, and reasoning skills into our children's learning to overcome and solve any problematic situation by applying their critical problem-solving ability.

Benefits ...

ALOHA Courses prepare children to face challenges in their daily life. ALOHA helps children to develop their intelligence, arithmetic skills, analytical skills, cognitive skills, higher observation power, keen listening ability, attentiveness, memory power, and speed with accuracy.

ALOHA students build their confidence through participation in National and International competitions held every year. International competitions allow children to experience a foreign culture at an early age. In these competitions, they solve 70 complicated sums within 5 minutes to test their speed and accuracy.

For the last few years, ALOHA International competitions held in Russia, China, Philippines, Malaysia, Indonesia, and 2020 in Spain (due COVID-19 postponed).

ALOHA Mental Arithmetic Practice enhances ...

- 1) Memory Power
- 2) Concentration
- 3) Attentiveness
- 4) Imagination Power
- 5) Analytical Skills
- 6) Listening Capability
- 7) Meta-cognitive Skills
- 8) Confidence
- 9) Arithmetical Skills

The ultimate goal of ALOHA Mental Arithmetic is not only to teach the children faster calculation or counting. At the final stage, students learn how to solve addition, subtraction, multiplication, division, root, and square root mentally. And as a result, their brain neurons get stimulated and start to make connections with other neurons. Each individual neuron can form thousands of links with other neurons in this way, giving a typical brain well over 100 trillion synapses (up to 1,000 trillion, by some estimates). As a result, a strong neural network establishes in the child's brain. More younger children can grow faster. Till now many researches made on the impact of Abacus learning in a child's brain. All researches found that Abacus Mental Arithmetic plays a very important role in a child's brain to develop the total faculty of their brain. As a result, they can do better in all areas of their daily life.

ALOHA Bangladesh National Level Compe- tition 2020

Award

Every year ALOHA Bangladesh Students participate in International competitions and do the best results among other countries. ALOHA Bangladesh students demonstrate their high skills performance in national level competitions and get awarded.

International Presence

ALPHA courses are gaining popularity among the teachers, parents, and students globally. ALPHA courses present in more than 40 countries including, the USA, Canada, Brazil, Columbia, Mexico, UK, Spain, Greece, Guatemala, Sweden, Peru, UK, Ireland, Australia, Russia, Azerbaijan, China, India, Indonesia, Philippines, and Bangladesh.

Dear parents,

Corona virus Disease (COVID-19) outbreak poses severe concerns to global education systems. Efforts to contain COVID-19 prompted unscheduled closure of schools in more than 100 countries worldwide. COVID-19 school closures leftover one billion learners out of school and other learning institutions.

Bangladesh Government is extending closure timing again and again. All educational institutions in the country have been closed since March 17. Suppose current trends in infections and deaths from the corona virus continue, in that case, the closing period may extend well beyond September, which was when the prime minister earlier said might be a possible time for considering a reopening. Experts predict that things will further deteriorate in the coming days.

In combating the loss in learning, one frequently suggested option is on-line teaching. But on-line education is challenging due to poor infrastructures, including network, power, and poor digital skills.

At these circumstances, ALOHA Bangladesh Team works day and night to establish on-line education flat-form in all possible forms to hook up our students in a touch of their daily learning. Any student from anywhere in Bangladesh, as well as from abroad, can join with ALOHA on-line learning flat-form and choose the way of learning at their convenience.

Saiful Karim
Chairman
ALOHA BANGLADESH

COVID-19 PERSPECTIVE

COVID-19 has changed everything in our lives. Its impact not only influenced our health, it somewhat paralyzed the whole system of society. COVID-19 severely hampered in the classroom education of our children. Even we don't know when we can go back to our daily routine work like before. The COVID-19 pandemic and the associated economic crisis are posing huge challenges, raising many unknowns and imposing wrenching trade-offs.

ALOHA Bangladesh on-line classes and on-line courses

Nobody anticipates this sudden pandemic catastrophe. But our teachers and colleagues are working hard to facilitate on-line teaching to the doorstep of our children. Finally, ALOHA Bangladesh builds a stable set-up to provide all ALOHA courses through on-line.

Our preparation regarding on-line classes

ALOHA Online Live Zoom Professional Classes:

To get the real-time user experience, we started our free on-line zoom live classes from available resources at teacher's residential facilities in April 2020 and continued till the 1st week of April 2020. Although we faced some disturbances due to Internet connection and electricity failure, we received tremendous responses from our parents and students.

From July 17, 2020, we have started uninterrupted live zoom classes from a well-established zoom set up in our corporate office and other branches. All existing ALOHA students are enjoying their live classes almost similar to their classroom environment and can see, interact with their friends and teachers.

We are taking make-up classes also through zoom on-line. We provide a complete video of live classes to each student so that they can review the lecture again. We are taking exams also through google forms.

Considering the pandemic impact on earnings, we reduced our tuition fees to 25% less and admission fees to 40% less for all ALOHA branches throughout Bangladesh.

We have re-developed our website www.alohabdonline.com to provide a facility to our students so that they can take admission and enroll for live classes through an on-line application from anywhere in Bangladesh. We have established a 100% secured digital payment system through bKash merchant banking.

ALOHA Corporate Virtual On-line Branch

Due to compliance issues and the shortage of trained professional teachers, it is difficult for us to set up ALOHA Branches in all places or districts. In addition to that, many parents are busy and could not manage their time to bring their children to ALOHA branches. Now students can enroll in our Virtual corporate office branch to complete their ALOHA courses from their home. Students of this virtual branch will get all facilities like other branches. Any students from any place in Bangladesh can enroll in ALOHA Bangladesh virtual class and complete their ALOHA courses through zoom on-line. Admission and tuition fees are flat and very reasonable for these virtual classes. Admission and tuition fees link <https://www.alohabdonline.com/contact/>

For any additional information, we will love to get your inquiry at

info@alohabdonline.com

Virtual on-line students will get following facilities:

- 1) All study materials, including books, abacus, school bag, pencil box.
- 2) In case of absence in regular on-line class, we will provide a make-up class.
- 3) On-line lecture video to review the lesson.
- 4) Get a regular certificate through the qualifying exam.
- 5) On-line regular exam.
- 6) Can participate in National level competitions through the qualifying exam.
- 7) Can participate in an International level competition through qualifying exams.
- 8) Anytime can get our expert assistance regarding curriculum issues through email, phone, or text message.

Our On-line Digital Courses

ALOHA online digital course facilitates you a shift from center oriented learning to Student-centered personalized learning. Our on-line courses are almost 75% cheaper than our physical classroom-based courses.

We know physical classrooms have some added advantages, such as socialization, group activities, direct interactions, and forceful learning habit. And digital on-line courses cannot replace these advantages.

But our digital on-line course has come up with some exclusive features; those can't include in the physical classroom:

- 1) Our digital courses will improve efficiency and cost-effectiveness.
- 2) You are getting video recorded lectures of the best teachers.
- 3) You can attend the class at your convenient time
- 4) Availability of creative contents that enhances cognitive knowledge
- 5) Online unlimited practice along with self-assessment
- 6) You will get an online voice for your Oral calculation practice, which improves your listening power.
- 7) You don't need to struggle to match your timing with the physical class schedule of the ALOHA centers
- 8) Your busy parent doesn't need to think about your transportation (pick & drop)
- 9) No downtime concerning your travel to ALOHA center due to massive traffic.

We are transforming all ALOHA courses in digital flat-form. These digital courses will help students who are willing to complete ALOHA courses, but they do not find ALOHA branches in all locations. Busy parents who can't match ALOHA class timing with their busy work schedule, and who can't afford this course at a higher cost will also get benefits from our on-line digital courses.

ADDED BENEFITS

We have introduced many creative contents in our on-line courses which will improve the following areas of skills of the students:

- 1) Procedural Knowledge
- 2) Factual Knowledge
- 3) Conceptual Knowledge
 - (a) Concrete Concepts
 - (b) Abstract Concepts and
 - (c) Nonverbal Concepts

Our digital courses are better than our physical classroom in respect of all perspectives. Due to time constraints and limited resources, including scarcity of skilled teachers in all locations, we cannot introduce added creative content in physical classrooms. However, physical classes have some added advantages, such as socialization, group activities, direct interactions, and forceful learning habit.

So, we invite our enrolled students to subscribe to our on-line courses to get added advantage of contents and self-learning transcripts with a very nominal monthly subscription.

For user experience and evaluation, our digital courses are open till 31st August 2020.

You can see the courses in our website or click following links.
